

Rain Tarp Set Up Guide

1. Determine the appropriate and desired height of your hammock, and hang it up.
2. Center the Tarp over your hammock and tie each side of the Tarp's ridgeline cord to the same stable anchor points your hammock is attached to. Position the tarp directly on top of your hammock, as the hammock will sink when you get in.
3. Attach the Tarp's guylines to tent stakes, or any other stable anchor point. Adjust the cord locks on each guyline to your desired tension. You may use our recommended hitch (see below) to secure guylines.
4. Your tarp is successfully set up! Sit back and relax...

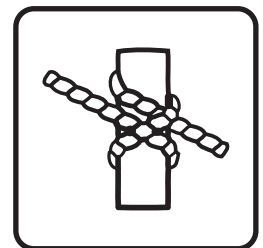

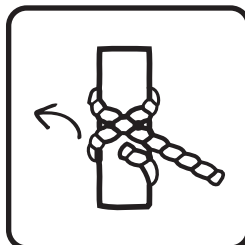

OUR RECOMMENDED HITCH: THE CLOVE HITCH

1. Make a loop with the cord around a secure anchor point with one end of the cord running underneath the other.

2. Using the cord running underneath, make a second loop around the anchor point in the same direction. Feed the end of the cord through the eye of the second loop.

3. Pull tight.
